CONTENTS

1. BEFORE INSTALLATION

Caution / Warning Marks

	This mark warns the possibility to arrive death or serious injury in case of wrongly used.
	This mark cautions the possibility to arrive serious human body injury or product lose in case of wrongly used.

Copy Rights

1. All Right and Authority for this Manual is belonged to SEWHA CNM CO., LTD.

2. Any kinds of copy or distribution without permission of SEWHA CNM CO., LTD. will be prohibited.

3. This manual may be changed as the version is upgraded, without previous notice.

Inquiries

If you have any kinds of inquiries for this model, please contact your local agent or Head Office.

Head Office : SEWHACNM CO., LTD.

Website : http://www.sewhacnm.co.kr

Email : sales@sewhacnm.co.kr

2. INTRODUCTION

2-1. Introduction

Thank you for your choice of this SI 460A Industrial Digital Weighing Indicator.

This SI 460A model is high-performance weighing Indicator.

Please review and learn this instruction Manual and enjoy your process efficiency

with "SI 460A" Weighing Indicator.

2-2. Cautions

1. Don't drop on the ground and avoid serious external damage on item.

2. Don't install under sunshine or heavy vibrated condition.

3. Don't install place where high voltage or heavy electric noise condition.

4. When you connect with other devices, please turn off the power of item.

5. Avoid from water damage.

6. For the improvement of function or performance, we can change item specification without

   previous notice or permission.

7. Item's performance will be up-dated continuously base on previous version's performance.

2-3. Features

1. SI 460A model is the square DIN SIZE and compact enough, so it is easy to install.

2. Front panel is covered with Polycarbonate film, strong against dust and water.

3. RS422, RS485 serial interface and Modbus(RTU) is standard installed.

4. User can choose various options ; 4-20mA, 0-10V, RS232C and Extra RS422, RS485.

3. SPECIFICATION

3-1 Specification

Content		Specification
Performance	External Resolution	1/20,000
	Internal Resolution	1/2,000,000 (±1,000,000)
	Input Sensitivity	Min 0.1μV/V
	Max Signal Input Voltage	3.0mV/V
	Load cell Excitation	DC +5V
	A/D Conversion Method	Sigma-Delta
	Decimal Point	0, 0.0, 0.00, 0.000
	Drift — Offset	10PPM/℃
	Drift — Span	10PPM/℃
	Linearity	0.001% of Full Scale
	Analogue Sampling(sec)	Max 60times / sec
Environment	Operating Temperature Range	-10℃ ~ +40℃ [14℉ ~ 104℉]
	Operation Humidity Range	40% ~ 85% RH, Non-condensing
Function	Calibration Mode	Test Weight Calibration Mode / Simulation Calibration Mode
	Display	6 digit, 15.24mm(0.6inch) Red Color FND
	Key Pad	5EA Standard Key pad
	Additional Digital Input	4pcs external input key addable
Communi-cation	Standard Serial Interface (RS-422/485)	Data Transference / Command Mode / Serial Printer Mode / Modbus (RTU)
	Option Serial Interface (RS-232C)	Data Transference / Command Mode / Serial Printer Mode
	Analog Output (Option)	0~10V, 4~20mA (Selectable)
Power	DC : 24V, Power Consumption 12W / AC (Option) : 110~220V, Power Consumption 12W	
Size	96mm(W) x 96mm(H) x 116mm(D)	Weight : 500g (DC) / 700g (AC.)

3-2. Front Panel

3-2-1 Front Panel (Display / Key Pad)
3-2-2. State Lamp

STEADY	When the weight is stable, ON.
ZERO	When the current weight is under zero range, ON.
TARE	When "TARE" function is set, ON.
HOLD	When "HOLD" function is set, ON.
TxD	When the Indicator transmits Serial communication data (Print data), Lamp is ON.
RxD	When the Indicator receives Serial communication data, Lamp is ON.

3-2-3. Key Operation

ZERO	1. Make weight value to Zero. 2. Cancel or ESC.

TARE	1. Set the TARE Function
	   1st input : "TARE", 2nd input : "TARE Reset"
	   (When "HOLD" or weight value is ZERO, then this key doesn't work.)
	2. Moving the cursor to left.

HOLD →	1. Set the "HOLD" Function
	  1st input : "HOLD", 2nd input : "HOLD Reset"
	  ※ When HOLD is on, "H" mark will be shown at the display.
	2. Moving the cursor to right.
	3. Under "SETUP" Mode, Enter to "Calibration" Mode.

PRINT ↑	1. Print out 2. Increase the value 3. F-Function setting : Increase set value 4. Saving weight date under F-function 103-0 or 2.
F	1. Press this key 4times, within 2secs, enter "SET-UP" mode. 2. F-Function setting : Save the value go to next step 3.Test Mode 1 : Standard serial interface test mode 4. Set-up Mode : Set point setting Mode.

●Setup Mode :It is a mode can SET-UP the calibration, Function of SI 460A .(refer to CH5. SET-UP)

3-2-4. Hot key (with F key)

F ➕ TARE ←	Continuous "TARE" setting (From the second TARE setting, use this key)
F ➕ PRINT ↑	If the Printer is installed, You can print out the "Grand-total data". (GRAND-total data can be checked though Print output).

Tip

Max accumulated weighing count : 999,999times

Over 999,999times →   return to "0" time

Max accumulated weight display : 999999999 (g, kg, ton)

Over 999,999,999   (g, kg, ton) →   return to "0" (g, kg, ton)

3-3 Rear Panel
1. Power DC IN: 24V (Power: 24V 1A recommended)

2. External Input terminal: Refer F-Function 231~234 to select each function.

3. Serial Interface terminal

Communication Method	TX+ Terminal	TX- Terminal	RX+ Terminal	RX- Terminal
RS – 422(Standard)	TxD+	TxD-	RxD+	RxD-
RS – 485(Standard)	Not used	Not used	RxD +	RxD-

4. Load cell Input

EXC+	EXC-	SIG+	SIG-	SHIELD

5. Analogue Output terminal (Option)

4~20mA (Factory Default)	(+)	(-)
0~10V (Selectable)	(+)	(-)

6. Option Serial Interface terminal (port No.2 top side)

| Communication	1(from left)	2	3	4
RS – 232C	GND	GND	TxD	RxD
RS – 422	TxD+	TxD-	RxD+	RxD-
RS – 485	Not used	Not used	RTxD+	RTxD-

⚠ **Caution** **Please check the Comm. and other specification in the label, attached on the cover plate first, and make connection according to that information.**
4. INSTALLATION

4-1. External Dimension & Cutting Size

External Dimension (Unit : mm)

Cutting Size (Unit : mm)

4-2. Installation Components

SI 460A	User Manual

4-3 Load cell Installation

Load Cell Wire Connection (In case of SEWHACNM's Load cell)
It depends on the manufacturer of load cell, please check the specification.

-----Sewhacnm Co.,ltd. Load cell & wire color----
※ Load cell wire color can be changed without prior notice.

Caution **Under Set-up the Load cell, if EXC+ and EXC- have a short circuit,**
It may cause damage in the indicator.(specially analogue board)
If you connect other wires to Load cell terminal wrongly, it may cause
damage in the analogue board.
Before connecting the load cell cable you have to power off and be sure to
connect the cable to the terminal correctly.
Do not weld near the load cells , Indicators or other devices.

Load Cell Installation

1. You can connect Max 8pcs of same capacity Load cells at once. (350 Ω)
2. You have to make horizontal balance on the ground.
3. If you install more than 2pcs of load cells, use Summing box and adjust output signal difference as minimum. It can make wrong weighing process caused by each load cell's variation.
4. If there is some temperature difference around Load cell, it can cause wrong weight measurement.
5. Don't do Welding job or Arc discharge around installation place. But, there is no choice, please disconnect power cable and Load cell cable.
6. If you measure static electricity material, please make earth between down part and up part of Load cell.

5. SET-UP

5-1. Test Weight Calibration Mode (Using test weight)

### 5-1-1. Start Test Weight Calibration Mode

Remove "CAL-BOLT" on the Front panel, . and press "CAL - LOCK S/W" inside.	When "CALIBR" displays, press [TARE] key, Then Test Weight Calibration Mode starts.

※ If you set password through "F95", you have to input the pass word.

### 5-1-2. Setting "Capacity of weighing Scale"

After displaying "CAPA", input max capacity with keys & Press [F] key to save & move to next step.

Tip **If you want to set Max capacity as 1,000kg and the division is 0.1 (100g), then just input "1000".**

5-1-3. "Decimal Point" and "Digit / Division" Value

After "DIVI" is displayed select Decimal point with [HOLD] key.

Whenever pressing [HOLD] key , decimal point will be changed.

Please stop at the optimal position. And select Division optimal division with [PRINT] key.

Finally press [F] key to save and move to next step.

Tip Max decimal point will be 0.001, and digit can be selected among 1, 2, 5, 10, 20, 50. Digit and decimal point must be fulfilled under the below condition.
- (division value / Max capacity value) cannot be over 1/20,000.

If this condition is not fulfilled, "$Err-1$" will be displayed and move back to capacity setting mode.

5-1-4. Measuring the "DEAD" Weight of Weighing Scale.
When **"DEAD"** displays, Press [F] key, then indicator will calculate dead weight of scale part automatically (While this process, there should be nothing on the scale part.)
Indicator will search "DEAE weight" during 10~20 secs automatically to find the best condition.

※ Over than 1/10,000 resolution setting,

To guarantee the preciseness, DEAD weight calculation (CAL00~CAL09) will be operated twice.

Tip In this step, if there is unstable condition such as some forces or Vibration on the scale part, "ErrorA" will be displayed, and "DEAD value" will not be calculated.

Please remove the cause of the force or vibration and process it again.

5-1-5. Calculating span value
If "SPAN" is displayed, input the weight of your "Test Weight" and press [F] key.
If "UP" is displayed, please load "Test Weight" on the scale part and press F key.
※   Over than 1/10,000 resolution setting,

To guarantee the preciseness, Span calculation will be operated twice.
After calculation, span value will be displayed on the display.   Then press F key.

※This span value is not a weight value.

When "CALEND" is displayed and calibration is completed.
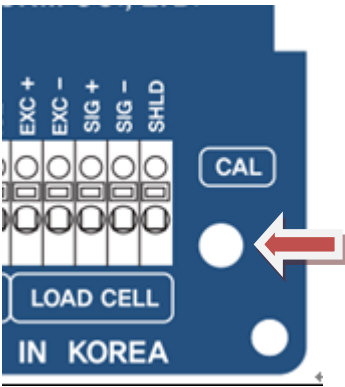

5-2. Simulation Calibration Mode(Calibrate without Test weight)
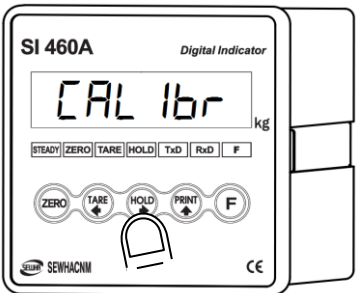

With this "Simulation Calibration Mode" you can make simple calibration without any "TEST weight" This calibration mode uses "Load cells' max capacity" and "Max Output Rate(mV)", so the weight adjustment degree might be less than "Test weight Calibration". The guaranteed resolution of this "Simulation Calibration" is 1/3,000.

5-2-1. Simulation Calibration Mode Start

Remove "CAL-BOLT" on the Front panel, and press "CAL - LOCK S/W" inside.

When "CALIBR" is displayed, press ⬇ key.

5-2-2. Setting "Capacity of Load Cell"
After "CAPA" displayed, Check Max Capacity of Load cell.

(refer the load cell label, or Test Report)

Input the Max Capacity of Load cell.   And press [F] key.

Tip In case of multiple pieces of load cells are installed, Please make sum of each load cell's capacity and make setting with Max Capacity.
EX) There are 4pcs of load cells, and each load cell's Max capacity is1,000kg.
Then, total Max Capacity will be 4,000kg(1,000 x 4) and you have to input 4,000.

5-2-3. Setting "Digit / Division" value
After "DIVI" is displayed select Decimal point with [HOLD] key.

Whenever pressing [HOLD] key, decimal point will be changed.

Please stop at the optimal position. And select Division optimal division with [PRINT] key.

Finally press [F] key to save and move to next step.

5-2-4. Measuring the "DEAD Weight" of Weighing Scale.
When **"DEAD"** displays, Press [F] key, then indicator will calculate dead weight of scale part automatically.

(While this process, there should be nothing on the scale part.)

It takes 10secs or 20secs to find the best condition.

Over than 1/10,000 resolution setting,

To guarantee the preciseness, dead weight calculation will be operated twice.

5-2-5. Inputting Max Output (Rated Output Voltage / mV)
Input the output value of load cell.

After "**mV**" displayed, Check the Rated output value of Load cell.

(Refer to the load cell label, or Test Report) . And Press [F] key to save and move to next step.

If input wrong value, there will display "Err-01", please go back to *Setting "Capacity of Load Cell".*
After recheck the label of load cell and retry the process.

After displaying "mV", input Load cell Rated Output (mV), referring the load cell label.

And press **F** key to save.
After finishing calculation, calculated "Span value" will be display with "CALEND"
Now, the Simulation Calibration is done, press **F** key to complete the calibration process.

Tip In case of multiple pieces of load cells are connected, the rated output will be same as single load cell's. (Because plural load cells are connected with parallel connection, the sum of rated output voltage is same as single load cell's rated output)
※Due to some variation between **"State output rate"** and **"Real Output rate"** of load cell, there might be some weight difference after finishing calibration.
If you want to make more precise weighing process, please measure real output rate of load cell and input the measured value. Then the weight measurement will be more precise than before.

5-3. F-FUNCTION Setting

■ Starting F-FUNCTION Mode
Press ⓕ kye 4 times → When "SETUP" is displayed, press (TARE) key.

Enter the function No. that you want to move And Press ⓕ key.

Whenever press (PRINT) key, function No. is increased.

Input the set value and press ⓕ key.

ESC   LEFT   RIGHT   INCREASE   SAVE

SI 460A DIN SIZE WEIGHING INDICATOR

■ **F-Function List** General Function Setting ("●" Factory default set value)

6-1-5. Modbus Memory Map

- RO : Read Only
- RW : Read Write
- Each P/N's set point can't over max capacity of Indicator.
    ex)35.00kg = 3,500 (0xDAC)
- When you input date and time, it should be 6digit.
ex) 1st January 2014 = 140101 (0x22345)
    15(H) : 50(M) : 17(S) = 155017 (0x25D89)
- Refer the memory register for regarding Lamp, Error, Digital Input, Standard Key, Special Key
- Modbus Function Codes
   '03' (0x03) : Read Holding Registers
   '04' (0x04) : Read Input Registers
   '06' (0x06) : Write Single Registers
   '16' (0x10) : Write Multiple Registers
- CRC Check Method is CRC-16.

Tip

Address	Length	Feature	Description
1	2	RO	Capacity
3	2	RO	Real weight
5	2	RO	Analog raw data
7	2	RO	Span value
9	1	RO	Division
10	1	RO	Decimal
11	2	RO	Current weight
13	2	RO	Tare weight
15	2	RO	Estimated weight
17	2	RO	Digital input
19	2	RO	Lamp
21	2	RO	Error
24	1	RO	Weighing step
33	2	RO	Current P/N grand total count

Address	Length	Feature	Description
35	2	RO	Current P/N grand total weight
437	2	RW	Date
439	2	RW	Time
441	1	RW	Basic key

6-1-6. Modbus Memory Register

(1) Digital Input Register (Address : 17, Length : 2)

Digital input data is indicated by 16bit.

0	1	2	3
INPUT_1	INPUT_2	INPUT_3	INPUT_4

(2) Lamp Register (Address : 19, Length : 2)

Lamp data is indicated by 32bit.

0	1	2	3	4	5	6
Steady	Zero	Tare	Hold	TxD	RxD	F

(3) Error Register (Address : 21, Length : 2)

Error data is indicated by 32bit.

0	1
Loadcell Error	Over Load

(4) Standard Key Register (Address : 441, Length : 1)

Standard Key input data is indicated by 16bit

0	1	2	3	4	5	6	7	8	9	10	11
-	-	Zero	Tare	Tare Removal	Hold	Hold Removal	Print	-	-	Grand Total Print	Grand Total Delete

6-2. Analogue I-Output Interface : 4~20mA (Option)

This output card converts weight value to Analog output signal (4~20mA) and transfers to external devices(Recorder, P.L.C), controlled by voltage output.

6-2-1. Specification

Output Current	Output Range :2~22㎃ (Default : 4~20㎃)
Accuracy	More than 1/5,000
Temperature Coefficient	0.01%℃
. Max Loaded Impedance	500Ω MAX

Tip

Under Calibration mode or "CELL-ERR" condition, Analogue output will not activated.
If the output is deactivated, the last output signal value will be hold until next activation.

6-2-2. Output Adjustment

① **Default analog output value is 4mA(weight zero) , 20mA(Full using capa).**

② **The analogue output value is adjusted with DIGITAL MULTI-METER.**

Upper main board   Select Switch

Check the setting to use the analog output switch in the upper main boad.
(Default : 4~20mA)

③ **How to adjust analog output value.**

Step1) Connect Digital multi meter to the Indicator (A out terminal).

Step2) Enter "F-function HF14 Minimum Analog Output Setting" mode.

Step3) Adjust the displaying value of indicator with keys(by 9,999) to make Digital multi meter's value as minimum(ex:4mA) and save.(When the SI 460C indicate about 5,200 , the Digital multi meter indicates about 4mA)

Step4) Enter "F-function HF15 Maximum Analog Output Setting" mode

Step5) after connect digital multi meter to the indicator, then adjust the displaying value of indicator with keys (by 32,768) to make Digital multi meter's value as maximum (ex:20mA).

※ **This D/A Converter has Max 1/5,000 accuracy, so this output is not suitable for high accuracy application, more than 1/5,000.**

6-3. Analog V-Output Interface :0~10V (Option)

This output card converts weight value to Analog output signal (0~10V) and transfers to external devices(Recorder, P.L.C), controlled by voltage output.
6-3-1. Specification

Output Voltage	0~10V DC output
Accuracy	More than 1/1,000

Tip

According to display weight of indicator, analogue signal will be output.

The operator can determine 10V output spot by setting F51 function.

Under Calibration mode or "CELL-ERR" condition, Analogue output will not activated.

If the output is deactivated, the last output signal value will be hold until next activation

6-3-2. Output Adjustment

① **Default analog output value is 0V(weight zero) , 10V(Full using capa).**

② **The analogue output value is adjusted with DIGITAL MULTI-METER.**
Upper main board

Select Switch

Check the setting to use the analog output switch in the upper main boad.
(Default : 4~20mA)

③ **How to adjust analog output value.**

Step1) Connect Digital multi meter to the Indicator (A out terminal).

Step2) Enter "F-function HF14 Minimum Analog Output Setting" mode.

Step3) Adjust the displaying value of indicator with keys(by 9,999) to make Digital multi meter's value as minimum(ex:0V) and save.(When the SI 460C indicates about 30,150 , the Digital multi meter indicates about 10V)

Step4) Enter "F-function HF15 Maximum Analog Output Setting" mode

Step5) after connect digital multi meter to the indicator, then adjust the displaying value of indicator with keys (by 32,768) to make Digital multi meter's value as maximum (ex:10V).

※ **This D/A Converter has Max 1/5,000 accuracy, so this output is not suitable for high accuracy application, more than 1/5,000.**

6-4 Serial Print (F-function 303 or 310-02 setting) – RS-232 Serial Interface.

It can be connected with all kinds of Serial interface printer, but the printing format is already programmed and fixed with SE7200/7300 model.

6-4-1. Printing Format

Using the RS-485 or 422 interface, please use convertor and converts to RS-232 and connect with Serial printer.
If you use RS-232 serial interface, connect directly without any convertor.

6-4-2. English Format

```
==============================
DATE :              2009-05-10
TIME :                18:00:10
  COUNT               WEIGHT
     1            +   1.330kg

     2            +   5.350kg

     3            +   1.380kg

     4            +   2.330kg
```

Continuous Print Format(Function 352-00)

```
==============================
DATE :              2009-05-10
TIME :                18:00:10
  COUNT               WEIGHT
     2            +   5.350kg

==============================
DATE :              2009-05-10
TIME :                18:00:10
  COUNT               WEIGHT
     3            +   1.280kg
```

Single Print Format(Function 352-01)

```

TIME  :               18:00:10
COUNT :             10
TOTAL WEIGHT :      258.145kg
==============================
         TOTAL DELETE
==============================
```

Grand Total Print

7. Error & Treatment

7-1. Load Cell Installation

Error	Cause	Treatment	Remarks
Weight Value is unstable	1) Load cell broken 2) Load cell isolation resistance error 3) Weighing part touches other devices or some weight is on the weighing part 4) Summing Board Error	1) Measure input/output resistance of Load cell. 2) Measure Load cell isolation resistance	1. Input Resistance of "EXC+" and "EXC-" is about 400Ω ±30 2. Output Resistance of "SIG+" and "SIG-" is about 350Ω ±3.5 3. Isolate Resistance is more than 100MΩ
Weight Value is increased regular rate, but not return to "Zero"	1) Load cell Error 2) Load cell connection Error	1) Check Load cell connection 2) Measure Load cell Resistance	
Weight Value is increased to under Zero	Load cell Output wire (SIG+, SIG-) is switched	Make wire correction	
"UN PASS" display	Load cell broken or Indicator connection Error	Load cell Check Load cell connection Check	
	Power was "ON" when some weight is on the load cell.	Remove weight on the Load cell	
"OL" or "UL" display(Over Load)	1) Load cell broken or Indicator connection Error 2) Loading over than Max Capacity	1) Load cell Check 2) Load cell connection Check 3) Remove over loaded weight	

7-2. Calibration Process

Display	Cause	Treatment
Err01	When Max capacity/digit value is over 20,000	Re-input the Max Capacity, less than 20.00 (Max Capacity / Digit)
Err04	Standard weight value is over than Max Capacity	Re-input Standard weight value with Number keys, under Max Capacity
Err05	Standard weight value is less than 10% of Max Capacity	Re-input Standard weight value with Number keys, more than 10% of Max Capacity
Err06	Amp. Gain is too big	Check standard weight's weight with set value. If there is difference between set value and real weight, please re-input the value (set value is too small)
Err07	Amp. Gain is too small	Check standard weight's weight with set value. If there is difference between set value and real weight, please re-input the value (set value is too big)
Err08	Under "F-function" model, set value is "N.A"	Check the correct value and re-input
Err-A	When there is continuous vibration on the weighing part,, indicator cannot process calibration any more.	- Find vibration cause and remove - Load cell check - Load cell cable and connecting condition check

7-3. Digital Weighing Indicator

Display	Cause	Treatment
"CELL-Er" or **"OUEr"**	1. Load cell Error 2. Load cell cable Error 3.Load cell connection Error 4. A/D Board Error 5.If Analogue value is over 1,040,000. ※ When weigh "-" value, If it is over set max capa, "OVER" is displayed. Ex) Even though set max capa is "100" and it is over "-100", "OVER" is displayed.	1. Under "TEST" mode 1, check analogue value. If you cannot get any analogue value or there is no change although adding load, please check load cell, load cell cable, connection conditions first. 2. Replace another load cell, and check the indicator condition. If you have same problem, please replace new indicator and check A/D board error. 3. Try to connect the indicator's A/D with the other indicator. 4. Check the power and connection of terminal.
"UNPASS"	1. Power is ON, when some materials are on weighing part. ※ Under "Normal Mode", if there are more than 20% loading of Max capacity, "**Un-Pass**" display will be appeared and indicator will stay until removing the load. ※Setting Back-up mode it can memory empty value, and it becomes set value without displaying" Un-pass")	1. If you set "Normal Mode", please check weighing part empty or not before turn on the power. If there are some materials in/on weighing part, please remove those materials and turn on the power. 2. Please try to set F-function 102-02(Back-up) mode so that the indicator can remember first empty value.
"SEt"	When Power is on, "SET" displays. It means EEPROM has some problem.	Please contact the distributor or Head Office.
"HALt"	H/W has some problem.	
"t-Err"	The dead Battery	

※ Under **"CELL-Er"**, Zero key, Tare key, Hold key and print key will not be activated.

SI 460A DIN SIZE WEIGHING CONTROLER

WARRANTEE CETIFICATION
This product is passed "Sewhacnm's strict quality test. If there is defect of manufacturing or abnormal detection within warrantee period, please contact our Agent or Distributor with this Warrantee certificate. Then, we will repair or replace free of charge.

WARRANTEE CLAUSE

1. The Warrantee period, we can guarantee, is one(1) year from your purchasing date

2. Warrantee Exception Clause

   - Warrantee period is expired.

   - Any kinds of Mal-function or defection caused by Modification or Repair without Sewhacnm's permission.

   - Any kinds of Mal-function, Defection, or External damage, caused by operator

   - Any kinds of Mal-function, Defection, caused by using spare part from Non-Authorized Distributor or Agent.

   - Any kinds of Mal-function, Defection, caused by not following Warnings or Cautions mentioned on this manual.

   - Any kinds of Mal-function, Defection caused by "Force Majeur", like Fire, Flood.

   - Without presentation of this **"Warrantee Certification".**

3. Other

   - Any kinds of "Warrantee Certification" without authorized Stamp is out of validity
